

Sarah GONIN

Freelance Fullstack Developer - React/Next.js & Java/Spring Boot

(+33) 672179299 · goninha@outlook.fr · [GitHub](#) · [Website](#)

ABOUT

Freelance fullstack developer specializing in React/Next.js on the frontend and Java/Spring Boot on the backend (also Node.js and Python/Django). I help businesses and individuals turn an idea or a mockup into a functional, robust, well-crafted web application, with careful attention to UX/UI - from showcase websites to internal dashboards to online stores. I work and communicate in French (native), English (professional) and Vietnamese (native). I actively integrate AI tools (Claude Code, Codex, Gemini) into my development workflow to deliver faster without sacrificing quality.

WHAT I OFFER

- **Full web application development:** from backend API design (Java/Spring Boot, Node.js, or Python/Django) to user interfaces (React, Next.js, Angular)
- **UI/UX-focused implementation:** turning Figma mockups into polished, responsive interfaces - interactive dashboards, dark mode, clean forms
- **Dashboards and internal tools:** data visualization (charts, maps, interactive tables), third-party API integration
- **E-commerce websites:** product catalog, cart, authentication, form validation
- **AI/LLM integration into your products:** AI-assisted features (automatic summarization, classification), with cost optimization via multi-model routing

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, Angular, TailwindCSS, Material UI, Shadcn/ui

Backend: Java, Spring Boot, Node.js, Python/Django, REST APIs, PostgreSQL, MariaDB, Redis

Tools & Practices: Figma, UI/UX & responsive design, Git, Docker, CI/CD, Maven, Jira, Agile/SCRUM

AI Tools: Daily use of Claude Code, Codex and Gemini, MCP setup & customs Skills to tailor AI workflows per project, LLM API integration

PROJECT REFERENCES

IMIN Event Mobile App *Do&Go, France | Dec. 2025 – ongoing (team of 7)*

Fullstack developer on an event management platform: backend API, admin dashboard, and mobile app redesign.

- Developed and tested a Node.js REST API (**40+ endpoints**), reaching a **98.2% regression test success** rate (Jest/Postman suite)
- Implemented **Redis caching**, reducing API response time from ~800ms–1s to under 500ms (**~50% improvement**)
- Designed a **React admin dashboard** with interactive data visualization (sorting, filtering, search) for the operations team
- Led a full mobile UI redesign (Figma → Flutter) across **11–15 screens**, including dark mode

Stack: Node.js, Flutter, MariaDB, Redis

Chat2Doc *Collaborative project · Java/Angular | 2026 – ongoing (team of 6+)*

Real-time collaborative documentation tool that turns team conversations into structured documentation, with an AI-assisted layer for summarization and content organization.

- Built a **real-time collaborative editor** - live chat synchronized with a document edited simultaneously, snippet deduplication, version history, full traceability
- Designed an **AI-assisted (LLM)** layer (with systematic human validation) for summarization and semantic grouping, with **multi-model cost optimization** via **OpenRouter**

Stack: Java, Angular, MariaDB, Docker, CI/CD

Airsen - Environmental Data Platform *Collaborative project · Java/Spring Boot | 2025 (team of 3)*

Fullstack contribution (backend and frontend) to a multi-source environmental data platform.

- Designed secure REST APIs in Spring Boot, integrating **3 external data sources** (air quality, weather, demographics), with Redis caching and rate limiting
- Built an interactive Angular dashboard combining **charts, data tables, and a geographic map** (via **Leaflet**)

Stack: Spring Boot, Maven, Angular, MariaDB, Docker, Redis, CI/CD

Homemcook - Recipe Web App *Collaborative project · Django/Next.js | 2023 (team of 2, backend lead)*

Primarily backend contribution, responsible for API design and implementation on a recipe discovery platform.

- Designed **15+ RESTful API endpoints** (Django); recipe creation, categorization, ingredient-based search
- Implemented secure **JWT authentication** with refresh tokens for persistent, frictionless user sessions
- Built a responsive UI (TailwindCSS, Next.js) in close collaboration with the frontend

Stack: Django, PostgreSQL, Next.js

Freshmeals - Organic E-commerce *Collaborative project · React/Firebase | 2022–2023 (team of 3)*

Frontend contribution to an organic food e-commerce platform.

- Multi-criteria product filtering, shopping cart, and **Firestore authentication**
- Real-time form validation, reducing input errors by 50% (measured before/after implementation)

Stack: React, React-Router, Redux, Firebase Cloud Firestore, TailwindCSS

CoPha - Tech Hackathon *Castelnau-le-Lez, France · .NET Core/Next.js | Oct. 2024*

- Built a web application (.NET Core + Next.js) in two days, awarded for **UX/UI design excellence** and implementation quality

EDUCATION

Bachelor's in Fullstack Development (Java & Angular) Diginamic, Montpellier, France | 2025 - 2026

Master's in Management (Sport & Tourism) Université de Montpellier, France | 2014 - 2016

Bachelor's in Translation & Interpreting (English) Hanoi Open University, Vietnam | 2009 - 2013

Front-End Developer Bootcamp Codegym (online), UK | 2022

Python Programming (Certificate) Coursera (online) | 2021
